

The productive way of opening your incoming mail

# THE PRODUCTIVE LETTER OPENER FOR HIGH MAIL VOLUMES

Professional, automatic, productive, economic, quick, reliable, clean and safe

**Day by day thousands of incoming letters need to be opened fast and clean.**

With the **milling technology** the **OL 800** opens your mail automatically, fast and very safe: The envelope edge is milled on the long side, without touching the content. The result is an opened envelope without any sharp edges.

The OL 800 opens your mixed mail **perfect** and **reliable** up to an envelope thickness of about **8 mm**. It is suitable for high volumes of incoming mail.

This **solid, compact** and **ergonomic** machine (letter opener incl. suitable conveyor stacker and table) ensures an **optimal, rational** and **space saving** process (much higher production volume since envelopes can be fed and, at the same time, the open envelopes can be taken out of the same working position).

The waste pin offers enough space for the chipping of about 10.000 envelopes.

Big, automatic feeding station

## Feed the envelopes and the mail opening can start!

- Big automatic, self-adjusting feeder
- All formats from C6 to B4.
- No pre-sorting of the formats necessary
- Reliable opening of various envelope thickness (up to about 8 mm)
- The milling technology offers highest safety for the content of the envelope and for the user
- Easy taking of the stacked envelopes from the long conveyor stacker (big stacking volume)
- Easy, trouble-free operation
- Simultaneous feeding and taking of the envelopes
- Adjustment of the cutting depth (from 0 up to 3 mm)
- **Options:** Counter and speed adjustment

Automatic feeding station

Conveyor stacker for the open envelopes

Suitable table for envelopes and mail boxes

Huge bin for the chipping

## OL 800

about 8 mm

about 103 kg

Letter opener OL 800 (milling technology) incl. long conveyor stacker and suitable table up to 40.000 envelopes/h

1120 x 780 x 1160 mm

230 V / 50 Hz, 8A

Envelope counter and speed adjustment
